Abstract (en)
[origin: EP2530219A1] The assembly has a slot that is designed with a shoulder of an upper head part, where the shoulder is extended in direction on its slot base or in area of slot base or in a rear area of the slot below horizontal upper slot surface. The shoulder is arranged in a supporting position above a horizontal upper boundary surface of an outer projection part of a projection (44). The shoulder is provided in the supporting position, if a wedge (62) is located in a locking position. A connection head (61) is clamped with a vertical scaffolding element (41) by the wedge.
