Abstract (en)  
[origin: WO2012069589A1] The invention relates to a building envelope element comprising at least one holding device (4) to be arranged in a preferably fixed manner and comprising an outer section (4b) oriented towards the outer side of a building to be provided with the building envelope element, at least one foil element (6) that comprises an outer foil layer (8) to be arranged on the outer side of the building and is anchored to the holding device (4) by an edge section (6a), and at least one thermal insulating element (20). The invention is characterised in that the thermal insulating element (20) is arranged on the outer section (4b) of the holding device (4), by a first section (22a), and lies on the edge section (6a) of the outer foil layer (8) of at least one foil element (6), by means of at least one second section (22b).
