Abstract (en)

[origin: WO2012072066A2] The invention relates to a movement lock for a locking element or an actuator in a locking system which can be operated in a mechanical or mechatronic manner. Provision is made here for the movement lock to have a blocking element which can be brought into engagement with the locking element or actuator by a system which is prestressed or is set in motion - and can be triggered by external application of pulses to the locking system.
