Abstract (en)
[origin: EP2644050A1] The clasp has movable strips (10, 20) pivoted about a central strip (3) to occupy a closed position for holding a bracelet around wrist of a wearer and an open position for removing the bracelet from hand of the wearer. The strips have an interaction element for interaction between the strips. The element acts on one of the strips when a third strip is actuated in the closing and/or opening phase of the clasp. The third strip includes a finger (15), which contacts on the strips when the third strip is actuated to cause locking/unlocking and/or setting of motion of the strips. An independent claim is also included for a bracelet.
