Abstract (en)

[origin: EP2644065A1] The letter plate (1) has a ball carrier (2) provided with a letter-opening (4), and a flap (6) which is supported at ball carrier over a flap bearing (8). The flap is rotated about pivot axis (10) between a closed position in which opening is covered and an open position in which ball is released. The flap bearing is arranged in parallel to pivot axis such that the edge area of flap is rotated around pivot axis without lateral shift.
