Abstract (en)  
[origin: EP2644392A2] The printing system (1) has an inkjet print head (4) that includes nozzles (7). A robot (5) generates a primary movement (17) such that two printing paths (A,B) of inkjet print head are located laterally to each other. A movement generating device (18) generates a secondary movement (16) which is perpendicular to the primary movement such that printing paths are adjoined laterally to each other.
