Abstract (en)

The modular ventilation system (1) for reducing moisture in underground walls or other underground parts of buildings (P), according to the invention comprises at least one panel element (3) which in turn comprises: A) a panel portion (5) which forms a containing wall suitable for resting on the ground (T) which surrounds or at least faces the underground part of the building (P) to be dehumidified; B) one or more spacer elements (7, 7') through which the panel portion (5) and/or the containing wall may lean against the wall, or other at least partly underground portion of the building (P) to be dehumidified.
