Abstract (en)

[origin: EP2644811A1] An elevator car has: a car frame; a cage that is supported by the car frame, and on which a car doorway is disposed; a beam that is disposed above the car doorway, and on which a hanger rail is disposed; and a car door that is moved along the hanger rail to open and close the car doorway. The cage has: a pair of wing walls that are disposed on two sides of the car doorway; and a doorway top plate that is disposed on an upper portion of the car doorway, and two end portions of which are fastened to the wing wall. A beam mounting bracket is mounted onto fastening portions between the wing wall and the doorway top plate. The beam is mounted onto the cage by means of the beam mounting bracket.
