Abstract (en)

[origin: EP2645044A2] The apparatus (2) has an actuating element (4) for actuating of a tensioning element (3) for tensioning a tensionable weapon (1). The actuating and tensioning elements are pressure-coupled with each other in an instep direction of the weapon or tension-coupled with each other against the instep direction of the weapon, through a coupling mechanism i.e. spring-loaded snatching mechanism. The coupling mechanism is arranged at the actuating the tensioning element. The coupling mechanism is designed such that tension-coupling is automatically released when exceeding a threshold portion. Independent claims are also included for the following: (1) a weapon (2) a method for tensioning a tensionable weapon by using a tensioning element.
