Abstract (en)
[origin: EP2645049A2] The device has an ignition mass (12) held in a housing (10), an opening (14) in the housing on one side (13) of the housing for igniting the ignition mass by a burning away propellant, another opening (18) in the housing on another side (17) of the housing for igniting the explosive mass by burning-off of the ignition mass and a slider (20) guided in the housing. The slider forms a piston-shaped lock of a compartment (28), which is driven into open position by an excess pressure in the compartment, where the excess pressure is generated during the ignition of the ignition mass.
