Abstract (en)

[origin: EP2398017A2] A method and an apparatus for encoding and decoding audio signals using adaptive sinusoidal pulse coding are provided. The audio signal encoding method includes the steps of dividing a synthesized audio signal into a plurality of sub-bands, calculating the energy of each sub-band, selecting a predetermined number of sub-bands having a relatively large amount of energy from the sub-bands, and performing sinusoidal pulse coding with regard to the selected sub-bands. Application of sinusoidal pulse coding based on consideration of the amount of energy of each sub-band of the synthesized signal improves the quality of the synthesized signal more efficiently.
