Abstract (en)
It is provided an antenna, which is to be disposed on a window glass, comprising a hot-side element (10) and a ground-side element (20). The hot-side element (10) extends substantially horizontally along the metal flange (1) in a direction separating from the hot-side feed point (3). The ground-side element (20) includes a ground-side first conductive line (21), and at least one of a ground-side second conductive line (22) and a ground-side third conductive line (23). The ground-side first conductive line (21) extends downward along the metal flange (1). The ground-side second conductive line (22) extends downward substantially in parallel to the ground-side first conductive line (21) closer to a center of the window glass than the ground-side first conductive line (21). The ground-side third conductive line (23) extends upward closer to the center of the window glass than the ground-side feed point (4) and the hot-side feed point (3).
