Abstract (en)
An in-ear phone having a housing (110) for receiving an electro-acoustic transducer (115) and a stabilizing unit (120) is provided. The stabilizing unit comprises a first section (121) fixedly connected to the housing (110) and a second section (122) being adjustable along a longitudinal direction of the stabilizing unit (120). The second section (122) of the stabilizing unit comprises a first end (123a) and a second distal end (122b). The second end (122b) is flexible and comprises a surface contact area for engaging in an upper concha of a user's ear.
