Abstract (en)
[origin: WO2012072576A1] The invention relates to a device (100) for applying viscous media, in particular adhesives, onto a substrate (S) moved past the device in the advancement direction (V), comprising a nozzle body (10), which has a plurality of dispensing nozzles (14) having dispensing openings (15), and further comprising a plurality of application modules (1, 2, 3, 4, 5), by means of which fluid media can be intermittently dispensed onto the substrate (S) via the dispensing nozzles (14) and which are arranged on the nozzle body (10), wherein in said device the application modules (1, 3, 5; 2, 4) are arranged in at least two rows (7, 8) that are offset from one another transversely to the advancement direction (V) of the substrate (S).
