Abstract (en)
[origin: WO2012073149A1] The invention proposes a modular pallet, the individual parts of which can be used to construct either a so-called transporting pallet or a so-called storage pallet. The transporting pallet is useable in the high-bay warehouse by an adapter 8 present in the high-bay warehouse being moved automatically beneath the transporting rail 7. Interchanging the intermediate component 6 (at least four of which are present in the pallet) makes it possible to change a storage pallet into a transporting pallet and the transporting pallet into a storage pallet.
