Abstract (en)
[origin: WO2012072207A1] The invention relates to a container (1), in particular for beverages, comprising a body (2) for receiving fluids, having a base (4), a first side wall (6) adjoining the base and an opening section (8) adjoining the first side wall and having a discharge opening (10); a cover module (12) that can be placed on or is present on the body (2) and has a second side wall (14) and a cover flap (16) adjacent thereto, wherein, when the cover module is present on the body, the first and the second side wall form an outline shape of the container, at least in some sections, the diameter of which runs through at least one maximum in the longitudinal direction of the container; and at least one film, in particular a shrink film (28), which, at least in some regions, in each case rests on the first and second side wall, in particular is shrunk on, and which extends on one side and the other side of the at least one diameter maximum.
