Abstract (en)  
[origin: WO2012074447A1] A consumer package (10) for holding a plurality of stacked articles (34), said package comprising end parts (2, 4), and side walls (6), and at least one line of weakness (16), along which the package can be opened. The line of weakness (16) runs along the entire periphery of the package (10), and is arranged so as to divide the package into a first package part (12) and a second package part (14), such that when the line of weakness (16) is broken, the package is divided into two separate package parts (12, 14), both having an opening at the line of weakness (16). The first package part (12) comprises a first edge region (13) adjacent to the line of weakness (16), and the second package part (14) comprises a second edge region (15) adjacent to the line of weakness (16), and the package (10) is made of wrinkleable or pleatable flexible material at least in the edge regions (13, 15) of the first and second package parts (12, 14). A means (11) for reducing the size of the opening is arranged in the edge region (13) of the first package part (12), so that the first package part (12) can retain the stacked articles, when the second package part (14) has been removed, and the second package part (14) is adapted to hold at least one, preferably 1-5 single articles (34). A means (17) for reducing the opening is arranged in the edge region (15) of the second package part (14), so that the second package part (14) can function as a bring-along package.
