Abstract (en)

[origin: WO2012072171A1] A method for reversibly coding an engine controller (1) for a motor vehicle (7) in manipulation-proof fashion, which engine controller is designed for use in motor vehicles (7) having different operating properties, wherein at least one first operating property is stipulated for a motor vehicle (7) in unalterable fashion, which method involves the start-up of the engine controller (1) prompting the first operating property to be stored in the engine controller (1), during and/or after an authentication operation, such that it can be changed only during and/or after a further authentication operation.
