Abstract (en)
[origin: WO2012072454A2] The invention relates to a refrigeration appliance (1) having an interior compartment (2) with an interior (3, 4) that can be cooled, a refrigeration cycle that is provided for cooling the interior (3, 4) and includes a compressor (6), and an evaporation dish (21). The evaporation dish (21) comprises a hood-type zone (22) for placing the evaporation dish (21) on the compressor (6), a peripheral zone that includes a bottom (25) extending away from the hood-type zone (22) and walls (26) laterally delimiting the evaporation dish (21), and a transition zone (28) which connects the hood-type zone (22) to the bottom (25) of the peripheral zone and is designed as a depression extending below the bottom (25) of the peripheral zone.
