Abstract (en)

[origin: WO2012130608A1] The invention relates to a method for producing a winding for producing electrodes for discharge lamps, a winding for producing electrodes for discharge lamps and a method for producing an electrode for discharge lamps. In this case, a method for producing a primary winding for producing an electrode for discharge lamps comprises: providing a primary core wire (3), which has a longitudinal axis (5) and consists of an electrically conductive material, winding a sheathed wire (7) around the primary core wire (3) along the longitudinal axis (5) of the primary core wire (3), with the result that the sheathed wire (7) forms a primary core wire sheath (9) surrounding the primary core wire (3), and winding a wrapping wire (11) around the primary core wire sheath (9) at a radial distance (RD) with respect to the primary core wire (3) along the longitudinal axis (5) of the primary core wire (3).
