Abstract (en)  
A cigarette comprising: a lighting end (14) and a mouth end (18); a mouth end piece segment (65) disposed at the mouth end; an aerosol-generation system disposed between the lighting end and the mouth end piece segment, the aerosol-generation system including a heat generation segment (35) disposed at the lighting end having a length including a heat source (40) configured to be activated by ignition of the lighting end and an insulation layer (42) of flame-retardant material disposed around the heat source; an aerosol-generating segment (51) incorporating aerosol-forming material (55), said aerosol-generating segment having a length and being disposed between, but physically separate from, each of the heat generation segment and the mouth end, wherein the aerosol-generating segment includes a substrate comprising a central core, a first outer layer (47) of a glycerin-treated fabric, coaxially disposed around the core, an intermediate layer (48) coaxially disposed around the first outer layer, the intermediate layer including aromatic tobacco paper, and a second outer layer (49) of a glycerin-treated fabric, coaxially disposed around the intermediate layer, wherein at least a portion of the first, intermediate, and second layers is stitch-bonded together with a substrate heat-conductive material; and a piece of outer wrapping material (64) oriented to provide an overwrap (i) around the aerosol-generating segment for at least a portion of its length, and (ii) around the heat generation segment for the length of that segment, those segments being connected together by the overwrap to provide a cigarette rod; and the mouth end piece segment being connected to the cigarette rod using tipping material (78).
