Abstract (en)
[origin: WO2011131274A1] The invention relates to an apparatus for producing packs for cigarettes, in particular packs of the hinge-lid type, having a folding turret (10) which is driven, in particular, cyclically in rotation and has circumferentially distributed pockets (21) for accommodating a blank (11) for a pack and pack contents (20), wherein the blank (11) is folded on the folding turret (10) as it is being transported. According to the invention, it is provided that the pockets (21) are assigned folding mechanisms (22) for the purpose of folding folding flaps of the respective blank (11) as supporting means for the pack contents (20), and wherein the folding mechanisms (22) provide a stop for the pack contents (20) upon introduction into the respective pocket (21).
