Abstract (en)

[origin: EP2648287A1] The box (1) has two main contacts (2, 3) connected with a charging plug, and an auxiliary contact (5) electrically connected with one of the main contacts over a contact bridge (4) in an operating condition of a vehicle. An end (15) of the contact bridge is connected with the auxiliary contact in a non-detachable manner. The contact bridge is transferred from a position in which the main contact is released for mounting the charging plug to another position in which the contact bridge connects the auxiliary contact with the main contact. The main contacts are designed as contact sleeves.
