Abstract (en)

[origin: EP2648424A2] A channel-specific compression characteristic curve (12) between input level (LE) and output level (LA) in processing channel of hearing device is specified. An input signal is amplified based on channel-specific operation compression characteristic curve (10). A channel-specific operating compression characteristic curve is defined corresponding to channel-specific compression characteristic curve below channel-specific input level threshold (LS). A course of channel-specific operation compression characteristic curve is defined with a compression ratio greater than threshold.
