Abstract (en)

[origin: EP2559491A1] The method for spraying a component adhesive onto surfaces in two modes, is claimed, where: the adhesive is alone sprayed onto the surfaces in a first mode and is sprayed jointly with an accelerator component (8-12 wt.%) in a second mode; and the accelerator component is alone sprayed on the surfaces in a third mode. The spraying is switched between the first, second and third modes. An independent claim is included for a device for spraying a component adhesive onto surfaces.
