Abstract (en)

[origin: WO2012076524A1] In order to optimize the failure safety of electrical and electronic components located in an engine compartment 2 of a rail vehicle, which additionally comprises at least one driver's cab 1, the rail vehicle is operated with an air conditioning system 3 which is provided to generate overpressure in the engine compartment 2 and air condition the at least one driver's cab 1. The air conditioning system 3 comprises a first air guidance system 21, 22 for introducing fresh air into the at least one driver's cab and a second air guidance system 13 for routing at least a part 24 of the air 21, 22 that is introduced into the at least one driver's cab into the engine compartment 2.
