Abstract (en)  
[origin: WO2012079559A2] The invention relates to a transmitting device (1), consisting of a driving body (2) and a towed body (3), which are both connected to a connecting cable (4), wherein the driving body (2) has means for terrestrial communication (5) and for satellite navigation (6) and means for supplying energy (7), the towed body (3) has means for generating signals in water and means (S) for receiving signals in water (9), and the connecting cable (4) has means for transmitting data (10), wherein the driving body (2) has means for moving (11) both on water and in water and at least one control and evaluating electronics unit (12) and means for exchanging data (13) with the control and evaluating electronics unit (12), and the transmitting device has means for sinking and surfacing (14) in the water and means for measuring depth (15).
