Abstract (en)

[origin: WO2012076387A1] The invention relates to a water-bearing household appliance (1) serving in particular as a laundry treatment machine for washing and/or drying laundry, comprising at least one cup receptacle (3) for receiving a cup (5) having a treatment agent, and a distributor head (15) comprising at least one cutting edge (16 to 19). The distributor head (15) is thereby adjustable relative to the cup (5) disposed in the cup receptacle (3), in order to penetrate a floor (9) of the cup (5) by means of the cutting edge (16 to 19) of the distributor head (15). The distributor head (15) further comprises at least one opening (20 to 23) associated with the cutting edge (16 to 19), through which water fed through the distributor head (15) can be fed into the cup (5) in order to rinse out the treatment agent from the cup (5) at the penetrated floor (9) of the cup (5). A film cover (7) of the cup (5) is preferably also penetrated by angle cutters (11, 12). Advantageous rinsing out of the treatment agent by the fed water is thereby made possible.
