Abstract (en)
[origin: WO2012076619A1] The invention relates to a sectional door leaf (15) comprising multiple door sections (18, 35) which are hinged to one another in a movable manner with respect to one another and an end section (35) of which forms an end region (52), said end section lying at the front in a closing direction (30) of the sectional door leaf (15). The invention is characterized by a relative movement detecting device (44) for detecting a relative movement between the end section (35) and a door section (18) that is directly or indirectly adjacent to the end section (35).
