Abstract (en)
[origin: WO2012076399A1] The invention relates to a carrier (1) for food to be cooked, said carrier comprising a base body provided with a bearing surface on the upper side thereof, for the food to be cooked, and at least one heating element (2) for heating the bearing surface. The invention is characterised in that the at least one heating element (2) is at least one radiant heating element (2) applied to the base body, at least in the region of the bearing surface for the food to be cooked, and the at least one radiant heating element (2) and/or the base body in the region of the at least one radiant heating element (2) comprises at least one heat distribution layer (10).
