Abstract (en)

[origin: EP2461268A1] The method involves passing all or portion of contactless electronic devices i.e. passive contactless devices (1, 2), through an electromagnetic field produced by a contactless reader (3), and initializing each electronic device. A connection is established between the reader and each electronic device. Visual information (5) in the form of image file e.g. photo/design, is sent to the reader by each electronic device. The received visual information is displayed on a display device (4) i.e. touch screen, by the reader. The displayed visual information is selected by a user using an input unit. The input unit is chosen from a group comprising the touch screen, a keyboard and a pointing device. An independent claim is also included for a contactless electronic device comprising a memory.
