Abstract (en)

[origin: EP2650187A1] The transport unit (1) has a frame (2) and a dump body (3) for receiving the material, where the dump body is held by the frame. A standard container-corner fitting (4), particularly an International Organization for Standardization (ISO)-standard container-corner fitting, is provided at four lower corners of the frame. The transport unit has a maximum height of no more than the height of a standard container, particularly an ISO-standard container. An independent claim is included for a method for supplying rail construction with material, particularly bulk goods.
