Abstract (en)

[origin: EP2650421A1] The method involves filling a washing tub (3) with washing water and/or rinsing water from a water tank (6), and filling the washing tub with tap water supplied by a water supply valve (18), where the water supplied by the valve flows through a detergent box (17) before filling the washing tub. A part of quantity of the water contained in the water tank is introduced directly into washing tub without passing through the detergent box during filling of the washing tub with the washing and/or rinsing water from the water tank. An independent claim is also included for a laundry washing machine.
