Abstract (en)

[origin: WO2012080667A2] The invention relates to a device comprising dosing valves (31, 32, 33) disposed in a circumferential row, such that the valves from one circumferential row define a circular path (TC1, TC2, TC3) during the rotation of the distribution device. The invention also includes a valve-cleaning system comprising at least one stationary dry brush (41, 42, 51, 52, 60) disposed on at least one circular path (TC1, TC2, TC3), such as to come into frictional contact with the valves of at least one circumferential row of valves.
