Abstract (en)

[origin: WO2012126997A1] The invention relates to an electric hand-power tool device comprising a rotatable tool spindle for receiving a tool, said tool spindle having a supporting element for supporting the tool. The supporting element (13) is designed such that the tool (1) can be moved on a path L in an axial manner along the tool spindle (3) in the direction of the electric hand-power tool against a force (F) after said tool comes into contact with the supporting element (13) when the tool (1) is received on the tool spindle (3).
