Abstract (en)

[origin: WO2012079899A1] A driving device has a gear housing with a receiving space for a gear, wherein the gear housing is to be closed by a housing cover by means of at least one connecting element. An outlet channel is provided in the wall of the gear housing and/or of the housing cover, the outlet channel connecting the receiving space in the gear housing to a fastening section on the gear housing and/or on the housing cover for receiving the connecting element.
