Abstract (en)
[origin: WO2012079851A1] The invention is based on a wiper device for a motor vehicle window, with a wiper arm adapter unit (10a - 10d) and a wiper blade adapter unit (12a - 12d), which, in a fitted state, form a form-fitting connection, and with a fastening recess (20a - 20d). It is proposed that the wiper device has a positionally fixed fastening means (18a - 18d) for engaging in the fastening recess (20a - 20d) in order to restrict the wiper arm adapter unit (10a - 10d) in the freedom of movement thereof in the fitted state.
