Abstract (en)  
[origin: WO2012079813A1] The invention relates to a pulsation damper (10) of a vehicle braking system, having a connection (14) for supplying and discharging fluid into a damper chamber (12), wherein said pulsation damper is characterised according to the invention in that the connection (14) has a segmented design, wherein a first segment (34) of the connection (14) forms a supply line and a second segment (36) of the connection (14) forms a discharge line and the two segments (34, 36) are delimited from each other by means of a separating wall (32).
