Abstract (en)

[origin: WO2012080047A1] The invention relates to a connecting element (1) for providing an electrical connection in a processing space (B) of a household appliance (H), wherein the connecting element (1) comprises a protruding, longitudinally displaceable contact pin (2) that can be displaced between a rest position protruding farther and an operating position protruding less far, wherein the contact pin (2) pushes into the rest position. The household appliance (H), particularly a cooking appliance, has at least one connecting element (1) for providing an electrical connection in a processing space (B) of a household appliance (H), wherein the at least one connecting element (1) comprises at least one connecting element (1) and is disposed on a side wall (S) of the processing space (B), particularly the cooking space. The insert module (17) serves for positioning in a processing space (B) of a household appliance (H), wherein the insert can be operated electrically, and wherein the insert module (17) has at least one mating electrical connection element (18) for contacting the connecting element (1).
