Abstract (en)

[origin: WO2012082041A1] The disclosure relates to a method for the manufacture of an interiorly insulated tank with an outer casing (1) and a port (5), comprising the steps that: a sack (3) of a flexible, non-tensile and fluid-tight material is wholly or partly inserted in the outer casing (1) so far that the sack, in the filled state, is substantially equidistant to the inside of the outer casing (1), that the end of the sack (3) facing away from the port (5) is positionally fixed in the outer casing (1) and that the space between the sack (3) and the outer casing is filled with a foam-forming insulating material (8), which is allowed to set whereafter the sack is removed.
