Abstract (en)

[origin: WO2012080020A1] Method for determining a variable-speed and continuous movement of display means comprising a step of modelling at least one value of torque and/or of mechanical force on the basis of values measured by a sensor, as well as a second step of solving a Newtonian equation of motion on the basis of these values of torque and/or of mechanical force, making it possible to calculate a simulated speed of the display means.
