Abstract (en)
[origin: WO2012080022A1] The invention relates to a computer system (1), comprising a power supply unit (3) for provision of at least one first supply voltage for operation of the computer system (1), a system board (2) having at least one first power supply line (19) for distribution of the at least one first supply voltage, and at least one processor (6) which is arranged on the system board (2) and is coupled to the first power supply line (19). The computer system (1) furthermore has a system monitoring module (7) arranged on the system board (2), at least one network interface (13) coupled to the system monitoring module (7), and at least one splitter (14), coupled to the network interface (13), for tapping off a remote feed voltage which is provided via the network interface (14). The invention furthermore relates to an arrangement for remote maintenance comprising a computer system (1) such as this, and to a remote maintenance method.
