Abstract (en)
[origin: EP2463881A1] The device i.e. power switch (10), has a rocker arm (16) and a latch moved translatory between two end positions and arranged at a control side (11) of the device. A rotary drive (30) has an axis (32) arranged vertically to the control side of the device and a fork (35), a lever and a pin for the rocker arm and the latch effectively connected with the axis. A retainer is provided for the rotary drive such that the rotary drive is integrated into the device. The fork, the lever and the pin of the rotary drive is pivotably mounted at the axis of the rotary drive.
