Abstract (en)

[origin: EP2653070A1] The pocket spring core has multiple spring strands (1), which lie next to each other and are connected with each other. The spring strands form a lying surface. Each spring strand has multiple springs, which are arranged behind one another in a row and are covered by a case (2) made of textile material in each case. A buckling-resistant reinforcing strip (4) is fastened to a spring strand. The reinforcing strip is connected with the spring strand in a form-fit manner, particularly by joggling. The reinforcing strip is made of plastic or wood.
