Abstract (en)
[origin: EP2653246A1] The machine is characterized in that it comprises an upper platform (51) as a working table provided at its center with a cap-holder rotating disk (1) with intermittent rotation and equipped with several radial windows (61) into which respective caps (56) are housed, four workstations symmetrical and complementary being provided around the rotating disk (1) and placed with an offset angle of 90° there between, which includes: A cap feeder device (2), a flanging device (3), a gluing device (4) and a device for evacuating (5) said caps (56). It further comprises characteristic means for transmitting synchronized motions in order to perform various operations on the caps (56).
