Abstract (en)  
[origin: EP2653641A2] The drive has a chain station (16) with a set of receiving sections (21, 22), where a set of parts of boundary between the set of receiving sections is separated in a longitudinal direction of a metal housing. The receiving sections face directly to facing sides of a sheet-like wall structure (26). A free-standing edge of the wall structure lies in a region of a deflection section (24). A set of lugs (23) of a power transmission chain (10) is guided on a side opposite to the power transmission chain during transfer and redirection of chain from one of the receiving sections.
