Abstract (en)
[origin: EP2653939A1] The dial (1) has a front face forming a visible display surface and arranged opposite to a back face. A cavity extends into a portion of thickness of the dial between the visible surface and the back face. An undercut surface (5) extends into the portion of the thickness of the dial between the visible surface and the back face. The dial is single piece made of flexible material selected from flexible elastomer or silicon or rubber or leather. A peripheral surface extends into the portion of the thickness of the dial between the visible surface and the back face. An independent claim is also included for a method for making a dial.
