Abstract (en)

The present document relates to the technical field of communication DC power supply. Disclosed are a battery protection device and method for DC power supply, to ensure smoothly switching to a battery for being powered without time delay and uninterruptedly supplying power to a load when DC power source is abnormal, and the protection requirements of various types of batteries can be compatible. The device of the present document comprises: a first branch circuit unit and a second branch circuit unit; a monitoring unit is connected with a DC power supply, the first branch circuit unit and the second charge circuit unit respectively; the first branch circuit unit and the second branch circuit unit are connected in parallel, with one end connected to the DC power source and the other end connected to the load units in series via a battery unit; when the monitoring unit detects that the DC power supply supplies power normally, it controls the first branch circuit unit to conduct, the DC power supply supplies power to the load units; when the monitoring unit detects that the DC power supply supplies power abnormally, it controls the second branch circuit unit to conduct, the battery unit supplies power to the load units.
