Abstract (en)
[origin: WO2012084130A1] The present invention relates to a suspension and anti- disengagement group for a wall cupboard comprising: a hooking device (11,111,211,311) equipped with at least : an arm (13) on a terminal end of which there is a hook (14), a first regulation screw (15) of said arm (13) to move it in a first direction, a second regulation screw (16) suitable for moving a lunette (17,117,217) acting on said arm (13) for activating its rotation, - a support (12,112,212,312,412) which can be fixed to a wall (M) said hook (14) being suitable for cooperating with said support (12,112,212,312,412) for the suspension of said wall cupboard, wherein the group also comprises an interference tooth (18,118,218) associated with the lunette (17.117.217) and a counter-flap (19) associated with the support (12,112,212,312,412), said interference tooth (18.118.218) being movable in at least one interference position with the flap (19), in a condition of the hook (14) engaged with the support (12,112,212,312,412), so as to prevent their reciprocal disengagement. The group according to one or more of the previous claims, wherein said support (12,112,212,312,412) has a plate-like area equipped with holes or looped seats for fixing to the wall by means of screws, pegs or similar items, said lower edge (21) and upper edge (22) protruding in a substantially perpendicular direction from said plate-like area.
