Abstract (en)  
[origin: WO2012095082A1] The invention relates to a method for conveying a chopped product, in particular meat, by means of a stationary perforated plate using rotary-driven cutting devices, the chopped product flowing through the holes in the stationary perforated plate. Said method is characterised in that the product is conveyed as a result of a vacuum that occurs at the output of the holes, said vacuum being created as a result of a water-jet pump action.
